

Summary

On September 15th, 2017, the Best-Practices in Oral Opioid agonist Therapy (BOOST) Collaborative was launched in partnership with the BC Centre for Excellence in HIV/AIDS and Vancouver Coastal Health. There were over 70 attendees from approximately 20 teams from across primary care, mental health, substance use and outreach services in Vancouver. On December 7th, for the second time teams came together for Learning Session 1 to share their progress to date, improve their understanding of quality improvement methodology, make new connections, and spend dedicated time working on their plans for Action Period 2.

In Action Period 1, teams have done work to ensure their Population of Focus has...

An accurate Point of Service

An accurate Most Responsible Provider

Active clients only

A 304.0* diagnosis code

Teams accomplished this work with the support of...

Profile EMR OUD Form and stored EMR queries

Educational Webinars

In-person coaching

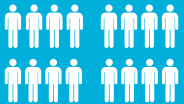

In-person Learning Sessions

Preliminary Results

629 clients with a 304.0* diagnosis code in **October 2017**

2355 clients with a 304.0* diagnosis code in **December 2017**

*304.0 is the ICD-9 diagnosis code for Opioid Use Disorder

4650 OUD Forms created since **September 2017**

90% Of prescribers using the OUD Form

>100 Participants from **19** teams

70+

PDSA cycles run to improve:

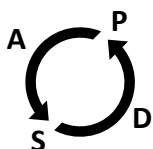

- Methadone prescription refills
- Missed oOAT[^] doses

- Missed appointments
- Engagement in care

- Including the client in care
- Retention on oOAT[^]
