

VANCOUVER COSTAL HEALTH - CLOZAPINE REGULAR TITRATION CHART

Name: _____ **DOB:** _____ **PHN:** _____

Brand name: _____ **Clozapine registration no:** _____

Medical history: _____

Known previous Clozapine side effects: _____

Altered Parameters conditions: **Yellow:** _____ **Red:** _____

Most responsible physician: _____ **CPSID:** _____ **Date:** _____

Prescriber's signature: _____

12		225mgs	
13		250mgs	
14		275mgs	
15		300mgs	

*In case of emergence of major side effects, discontinue this titration regime and continue further titration on weekly titration chart or variable titration chart for a slower rate of titration until the desired dosage is reached.

*In case of response at a lower dosage, discontinue further titration and move to regular medication chart for further prescription of Clozapine and document the clozapine level achieved at that dose for future reference.

*In case of emergence of adverse side effects, cross taper other antipsychotics as they are likely adding to the adverse side effects.

*Consider taper off the other antipsychotics when the Clozapine dosage reaches 50-75mgs a day even if there are no adverse side effects.

*Smokers need higher doses or alternatively Fluvoxamine addition to augment Clozapine levels.
